

## **WORKSHOP Using the Window on the World CD in your School**

The following documents are taken from the support material handed out at the Conferences for teachers held in November 1998 giving training in how to use the CD-ROM

**This workshop included two sections;**

**Using the IT tools on BNSC CD-ROM - Paul Mason**

**and**

**Meeting the needs of the National Curriculum in Geography/Science & ICT - Alison Caldwell**

There are hand-outs for Geography, Science and IT. Each document suggests a teaching topic that could be prepared using the CD-ROM and a check list of the requirements of the NC that are relevant to the topic and are included on the CD. The check list is not an exhaustive list of NC requirements - only those requirements that are relevant to the topic and are found on the CD are shown. This is intended to be a guide for teachers, who can see at a glance what requirements could be met using the CD-ROM to teach the suggested topic.
